A RED DEER MAN'S IMPRESSIONS OF SOUTH AFRICA

MR. ERIC PYKE TELLS OF SOME PRESENT DEVELOPMENTS IN SOUTH AFRICA

Mr. Eric Pyke, son of Mr. Dugald Pyke, of Red Deer, has been good enough to give to The News some information about present-day developments in South Africa. Mr. Pyke has just returned from South Africa, where for the last two years he has been associated with the South African agent of his company, the Waygamack Pulp & Paper Coy. of Three Rivers, Quebec.

At the present time South Africa's trade relations with Canada is naturally that of an importer. South Africa buys from Canada large quantities of paper, both news-print and wrapping paper. Some 90 per cent of the whole supply of paper in South Africa is bought from Canada. Further South Africa buys from us much agricultural machinery. The Massey-Harris Company, for instance, does a large trade with South Africa. Recently South Africa did away with the former general imperial preference, and substituted for it a preference on certain definite articles, amongst which are newspapers, agricultural machinery and white lead. So far South Africa has not got any equivalent preference from Canada in return, but she has recently appointed trade commissioners to Canada and the United States. Mr. Eric Louw, whose headquarters are in New York and Ottawa, and who will probably try to negotiate a comprehensive trade treaty between Canada and South Africa for the benefit of both. South Africa's main exports at present are gold and diamonds, wool, fruits, ostrich feathers, mutton, which is simply the South African name for our corn, and wine. She sells little of any of these things at present to us, but has a large trade in them with the United States in spite of the tariff of the latter country. She is also trying to develop tourist traffic with the United States, for which purpose the South African Railways have appointed publicity agents in the United States, whose main policy would seem to be to develop the tourist trade between the northern winter, which, of course, is the South African summer. South African scenery is of a very picturesque, in places magnificent, character, such places as the Victoria Nyman falls, on the Zambezi river and the burial place of Cecil Rhodes in the Matopos Hills being amongst the great sights of the world.

South Africa recently had a bad time economically through the strike of seamen on the British steamers trading to and from South Africa. This hit South Africa very hard, especially the trade in perishable foodstuffs. So bad was the situation that at one stage some of the 1000 cases of oranges were thrown into the sea daily, and in the streets of Cape Town the equivalent of 50 would be thrown away. About 200 oranges. Complete disaster to the fruit-growers was averted by the chartering of an expedition to take the fruit crop to Britain, and it is believed that most of the fruit was got over in fair condition by this means. At one time during the strike there were 22 steamers lying in harbour at Cape Town unable to leave owing to the strike. The S. S. Ballarat lay in harbour for six weeks with 900 British emigrants for Australia on board. They had to be kept by the P. & O. Company, the owners of the ship, but they had to do all their own cooking, cleaning up, and other daily work on board the steamer. Various organizations in Cape Town helped to look after them and give them some entertainment during the long delay till the strike ended and the "Ballarat" could resume her voyage for Australia. So difficult was the situation that in one instance it was even necessary to send mails to England by a German steamer, a development which would have seemed incredible a few years ago.

South Africa differs from Canada in being a country of very large farms instead of comparatively small ones. The average farm is about 2000 acres in extent, of which as a rule only a very small part is under arable cultivation. The greater part is occupied with raising sheep and cattle. Cotton growing is beginning in the country, and although still in its infancy is making very rapid progress. The country is far more subject to insect pests than Canada. The locust is one of the most formidable of these. A locust cloud would destroy a complete crop in a night. Recently great efforts are being made to destroy the locusts. An expedition was sent into what used to be German territory in the flying stage of their development by spraying the ground with poison, and it is hoped that by this means the locust will be gradually destroyed just as the mosquito has been in some parts of the world, and it is hoped to destroy the even more dangerous and deadly tsetse fly, the spreader of sleeping sickness, in Rhodesia and Central Africa.

South Africa has another tremendous problem to solve, from which Canada is more or less completely free. This is the native problem. Unlike the Indians of Canada, the natives of South Africa are numerous, and are anything but resigned to the continued dominance of the white man. The proportion of the white population to white is about four to one, and unfortunately the white population is tending to decrease, while the native population is increasing, as more white people are leaving the country than are coming to it.

For the present the policy of the government seems to favour the segregation of the races. Large areas are set apart specially for the natives, vastly larger than the Indians reserves in Rhodesia and Central Africa. It is suggested that the natives who are their own government and manage their own affairs subject only to a certain amount of white supervision. The natives for the most part are quite indolent to accept such a

FROM THE NEWS FILES

Twenty Years Ago
The News was arguing that Red Deer ought to be chosen as the capital of the Province.

The Red Deer Nursery Company was organized with Mr. Joseph Slade as manager.

W. J. McLean, Principal of Red Deer school, made a Christmas holiday trip west of the Clearwater.

The Red Deer Branch of the Red Cross has found it necessary to extend its annual campaign for funds into the month of January in some localities.

Every dollar membership in the Alberta Division assists the work of building a healthy race here in this Province where all the money collected is spent on behalf of the sick and the underprivileged.

If you have been misled by the collector, please send your contribution to the Alberta Division, 226 Tradewind Building, Calgary.

His Proper Place
Most of us have heard the story of the bridegroom who, on being asked to return thanks at the wedding breakfast on behalf of his bride, began his speech as follows:

"Friends excuse me if I am a bit nervous. This thing—here he laid his hand lovingly on the hand of his young wife—'has been forced upon me.'"

The story was capped recently by another on somewhat similar lines, the teller being the veteran Sir Squire Bancroft.

Sir Squire's story concerns a nervous bride who began his speech at public dinner by saying:

"Mr. Chairman, I am unaccustomed to public speaking. My proper place is on the scaffold."

C.P.R. Makes Grain History
In handling the Canadian banner grain harvest of 1925, the Canadian Pacific Railway has established record after record in the marketing and loading of grain so that the figures for the current year constitute a record not only for Canada but for the world.

A. Hutton, general superintendent of transportation of the system, has issued a report covering the movement of grain on Canadian Pacific western lines from August 1 up to midnight Friday, December 18, which is shown that on one day, Friday, November 20, 3,559,000 bushels of grain were marketed and on Friday, November 13, 1,994 cars containing approximately 2,921,000 bushels of grain were loaded. In the twenty-four hours of that day this represented 81 cars loaded every hour or a little more than one and one-third cars per minute.

Usually meetings and loadings take a sudden drop with the approach of the close of navigation but this year there was little diminution as the report shows loadings on December 8 at 1,425 cars. Despite adverse weather conditions in the month

of October which retarded threshing, marketings up to December 18 on Canadian Pacific western lines totalled 100,619,000 bushels of wheat and 36,345,899 bushels of coarse grains. During the same period 118,180 cars carrying approximately 173,104,000 bushels were loaded. Of this loading, 8,000 cars went to Vancouver, and a considerable amount was absorbed by interior flour mills, but the great bulk went to the head of the lakes, Fort William and Port Arthur, passing through the Winnipeg yards, including North Transcona, the largest individual yards in the world having a capacity of 10,000 cars.

From there the movement was over a 420 mile stretch of double track line to the lake front and on this run some records were also made, the highest number of loads moved eastward in any one day being 1,640. The daily average was in numbers of four figures.

The arrangements made by the Canadian Pacific Railway for the conveyance of the crop worked smoothly and there was not a single case of crop shortage justifying the provisions made in the way of up-to-date facilities and heavy freight power,

household world. Its widening service for the health and happiness of the people of Alberta has brought it right into the hearts and the homes of every citizen. In its appeal for memberships and funds, the Alberta Division really asks for more than money; it wants the interest of the people themselves, for they, individually, are part of this great, live, working organization.

NO. 2 PACK WOLF CUBS

1st and 2nd Stars: As it is intended to have all 1st and 2nd Star and proficiency badges presented at an early date, Cubes who have certificates to obtain covering balance of tests are urged to obtain them and hand them in to the Cubmaster as soon as possible. Tests in signalling, 2nd Star, may be carried out by competent Scouters or Scouts, and a certificate should be obtained by the Cub tested. When a Cub has obtained 1st and 2nd Star he may go in for proficiency badges, and for each badge awarded to Cub the ribbon of the badge is placed on the Totem Pole. Thus the standing and efficiency of a Pack is indicated by the ribbons on the Totem Pole.

AKELA 2

FEAR

The bogie man, the goblin and the ogre, invented to frighten children into behaving, often may the disposition of a child. They tend to cause timidity and have other unfortunate consequences.

Parents should refrain from telling ghost stories that only serve to arouse dread in the mind of a child. They should teach their children that sleeping in a dark room is the most natural thing in the world and that dark corners hold no terrors.

For the average child, the parental example of courage and fearlessness in meeting all the children's fears, the vent timidity and cowardice in later years.

It is always important to interpret the fears of children correctly and to meet them in a rational way. In the case of a child afflicted with intense and persistent fears, a physician should be consulted. Children who suffer from "night terrors" often have physical infirmities, and, with their removal, the fears disappear. In some cases "night terrors" are caused by heavy meals or by excitement just before bedtime.

A PERFECTLY GOOD REASON

"Mother, please ask that man to get up."
"But, dear, why do you want him to stand up?"
"Because he is sitting on my jelly-fish."

Service That Counts

To be able to sit down to a meal well cooked, and served complete to the smallest detail,—that is what you will find when you eat here—served by an efficient and courteous staff.

As another small item of our service we have recently installed the new Orthophone, the very latest gramophone development. This machine will play from 10 a.m. till midnight. Come in and hear it.

COMMERCIAL CAFE

SEED BUYERS PROTECTED BY THE GRADE SYSTEM

Judging from the high regard in which Canadian seed is held in other countries, our system of conducting the commerce of seed on a basis of legal grades has proved its soundness. The fundamental principle of the system is that the quality of seed sold must conform to definitions prescribed by law. In his report for 1925 the Dominion Seed Commission points out that our grades are based primarily on the general quality and purity of the seed, determined by its freedom from noxious and useless weed seeds, and its percentage of pure living seeds. The general appearance of the seed as influenced by weather or seasonal conditions, cleaning, maturity and disease is also taken into consideration. Cereals, grasses, sweet clover, field corn and all other forage and fodder crop seeds have been brought under this complete grading system, and all grading is done by the qualified official inspectors of the Seed Branch.

Here and There

William Valgardson, a farmer at Taber, Alberta, is glad he went into sugar beet raising. He secured a \$50 return from three and one-half acres of land.

Winter sport activities at old Quebec are in full swing. This is considered the most successful season of entertainment for years past. Hundreds of sport enthusiasts and tourists from the New England states, Canada, and other parts of the continent are turning up in force at the Ancient Capital.

Miss Isabel Coursier, only nineteen years of age, is the world's woman champion ski jumper. She created a world record at Revelstoke, B.C., at the age of sixteen in 1922. This winter, taking part in the winter sports at Quebec, Miss Coursier made a jump of 83 feet in the international-intercollegiate ski contest.

A report from Smiths Falls, Ontario, is to the effect that a train was stopped in order to avoid a collision with an automobile making for the tracks over a bridge. The train was stationary when the automobile struck one of the cars. The occupants of the automobile escaped uninjured.

Tourists on the Canadian Pacific train Empress of Scotland were in the famous King Solomon quarries, beneath the walls of Jerusalem, on Christmas night. Many of them, according to the Canadian Press at C.P.R. head offices, bought gaudies, made from the stone of the quarries, with olive wood handles.

According to information at the headquarters of the Canadian Pacific Railway, holiday passenger traffic this year from points west was the heaviest since 1920 in the past few weeks and represented a fifty per cent increase over the amount reported for the same period of the month of November of 1924. Net profits for the eleven months ending November were \$35,287.83, an increase of \$1,830,043.20 over the corresponding period for 1924.

Canadian Pacific Railway earnings for the month of November were \$1,193,239.12 over the same period for 1924. Net profits for November show an increase of \$215,153.80 over the month of November of 1924. Net profits for the eleven months ending November were \$35,287.83, an increase of \$1,830,043.20 over the corresponding period for 1924.

According to Johannes Borge, journalist, of Bergen, Norway, who is visiting the Dominion to record his impressions of Canada, the country for farming has become a very important industry in parts of Norway. There are now about 150 silver fox farms in the Søndmøre district of Norway. Last autumn, about 120 silver foxes, estimated to be worth 1,000,000 kroner, were shipped from the island of Norway.

Traffic on the Great Lakes this season compares well with that of last year as far as Canadian Pacific earnings are concerned. M. McDuff, manager of the Great Lakes Steamship Service explained recently that while grain tonnage fell below that of the 1924 season, passenger traffic and package freight business was considerably better, making the total well up to the average.

A party of Mennonites, bound for western Canada, mostly to Manitoba, arrived in Montreal recently with the report that those of their sect who had gone to Rosario, Mexico, were far from satisfied and intended going north. It is understood that 1,000 Mennonites have emigrated to Canada within the last two months and that about 2,500 more would be coming in the spring. Hans Seidler, in charge of the party, said not one of them thought of going to Mexico.

NONE OF THE GANG

"Have you a Charles Dickens in your home?" asked the polite book agent.
"No!" he snapped.
"Or a Robert Louis Stevenson?"
"No!"
"Or a Gene Field?"
"No, no, what's more, we don't run a boarding house here, either. If you're looking for them fellows, you might try the house across the street."

CENTRAL ALBERTA

FARMERS TO HEAR J. G. HANEY, EXPERT

Arrangements Completed by The Calgary Herald and the Alberta Farmer for a Campaign of Diversified Farming Addresses, Beginning January 25 and Lasting Till February 6. Itinerary Shows Date and Place of Meetings to be Held.

Arrangements have been completed by The Calgary Herald in association with The Alberta Farmer for a campaign of diversified farming addresses to be given throughout Central Alberta by J. G. Haney, beginning the last week in January and lasting till February 6.

The News is glad to associate itself with its contemporaries in the campaign in this district. More than 3,000 farmers of Southern Alberta listened to Mr. Haney last winter in a similar series of meetings and want him to come back this year, but Central Alberta secured his promise.

An important factor associated with the addresses given by Mr. Haney is the time allotted after each address for questions. He welcomes interested farmers, believing this to be one of the best methods of solving the difficult questions that come up.

About ten years ago the agricultural extension department of the International Harvester Company established two demonstration farms in the northwest—one near Aberdeen, S.D., and the other near Grand Forks, N.D.—and a man by the name of J. G. Haney was placed in charge of them as superintendent.

The purpose of the farms was to demonstrate by actual practice the right methods for making farming in the northwest permanently profitable.

The South Dakota farm was all virgin land that never had been plowed or cultivated. The North Dakota farm had been continuously cropped for so long that the soil was rich and had been robbed of nearly all its fertility. The main problem in operation of the farms was to show how to restore the fertility and build up the soil.

The success in the operation of these two farms for the ten or more years has been a great success.

Years of scientific instruction at the Kansas Agricultural College and at other colleges, followed by ten years of practical farming experience when conditions were similar to those in the northwest, has fitted Haney for the big task assigned him.

Used Crop Rotation
He was told to make the farms pay without any particular financial assistance from the Harvester Company.

He began with a few hundred acres, as any farmer of little means must do. He adapted a system of crop rotation, growing corn, wheat, soybeans, alfalfa and sweet clover, and also legumes and farm manure put fertility back into the soil. He showed the farmers how to grow their crops and how to use the land.

He showed them how to use the land and how to use the crops. He showed them how to use the land and how to use the crops. He showed them how to use the land and how to use the crops.

He showed them how to use the land and how to use the crops. He showed them how to use the land and how to use the crops. He showed them how to use the land and how to use the crops.

SELECTING BIRDS FOR BREEDERS

(Experimental Farms Notes)
Vigour in the birds selected for breeding is of paramount importance. No matter for what purpose the mating is made, vigour in the breeding stock cannot with safety be overlooked. Results of experiments conducted by the Dominion Experimental Farms show that the best breeders, as good, or even better, when pullets are used, but as a rule the viability and growth of the resulting chicks are much better where hens are used. This does not mean that well maintained flocks should be placed on hens. The fertility and hatchability of the eggs, many times, are as good, or even better, when pullets are used, but as a rule the viability and growth of the resulting chicks are much better where hens are used. This does not mean that well maintained flocks should be placed on hens. The fertility and hatchability of the eggs, many times, are as good, or even better, when pullets are used, but as a rule the viability and growth of the resulting chicks are much better where hens are used.

Red Deer Municipal Hospital

Hospital Insurance 1926, \$6.00

Any resident or property owner of the City of Red Deer paying the sum of \$6.00 on or before January 31st, 1926, will be entitled to receive hospital treatment in the Red Deer Municipal Hospital for himself or herself and for all dependent members of his or her family living in the City of Red Deer for \$1.00 per day during the year 1926.

Cut out and fill in the form below and send it with \$6.00 to the undersigned. If you are a property owner, the amount or the proportion of the \$6.00 paid will be credited to your hospital tax on property for 1926.

A. T. STEPHENSON, Secretary-Treasurer.

Most satisfactory for supplying the needed protein is the ration. A number of protein supplements are on the market which are non-portable and less bulky than milk. The most common of these is tankage, a commercial slaughterhouse by-product. This is, however, more expensive and less satisfactory than milk. A ton has been conducted at the Dominion Experimental Station, Scott, Sask., by feeding three lots of pigs a similar grain ration during the growing period, with ten per cent tankage added to the ration in one lot, and an average of six pounds of buttermilk per head per day to the second lot. A third lot was used as a check and fed the grain ration with water. The amount of grain required to produce one hundred pounds gain in the buttermilk lot was only three hundred and thirty-five pounds, in the tankage lot three hundred and sixty-five pounds, and in the check lot four hundred and forty-three pounds. In another test where two lots were fed a similar grain ration, with one lot getting an average of six to seven pounds of buttermilk per head per day for only forty-three days, the amount of grain required per hundred pounds gain was two hundred and fifty-five pounds in the case of the buttermilk lot and four hundred and seventy-five pounds in the check lot. The buttermilk was no longer available and the lots were divided—half of each being put on pasture and the remainder continued in feed without pasture. In both cases the pigs which had received buttermilk for forty-three days not only held the difference in weight gained while getting buttermilk, but made greater gain as a result of having received the smaller amount of grain. The difference was marked in the dry lot than on pasture.

A very reasonable quantity of milk seems to be sufficient to make a great difference in gain and in addition the low getting buttermilk invariably show a bloom and thrift which is lacking when milk is not supplied. When a pig is given all the milk it will take its middle usually becomes heavy and the best value is not realized from the milk. Farmers living near a creamery should, when possible, make use of this very valuable feed if there is not enough skim-milk available at home.

THE HON. GEORGE HOADLEY DISCUSSES LEGISLATION WITH DOCTORS

The Honourable George Hoadley, Minister of Health, last week discussed with a representative gathering of the doctors of Alberta certain proposed legislation of the Alberta government. This includes the creation of an appeal board to hear appeals from decisions of the governing bodies of the professions with respect to complaints made against members of the professions. 2. The appointment of a travelling coroner to inquire into all cases of mysterious and suspicious deaths. 3. Measures to insure that only competent surgeons shall perform operations and that men professing to be specialists in any particular branch of the medical professions should have real qualifications for such a position. 4. Regulations to prevent fee splitting between medical practitioners.

THE ABNORMAL WINTER

A great deal of comment is being made on the extraordinary winter which we have enjoyed up to the present, and the Calgary Herald last week made inquiries amongst a number of the citizens of Calgary and district who have lived longest in the Province as to whether any such winter had occurred within their experience. For the most part they said that they did not remember any such winter since they were young, and their recollection extended back into the '70s, '80s and '90s.

MILK FOR GROWING PIGS

(Experimental Farms Notes)
Maximum development of the growing pig is not possible without a large amount of protein being supplied in the feed. Buttermilk, skim-milk has been found to be the
